

## Newsletter December 2005

### Cooperation between Priamus and Dr. Gierrth Ingenieurgesellschaft mbH

Priamus System Technologies GmbH and Dr. Gierrth Ingenieurgesellschaft mbH, Würselen, signed a distribution agreement.

From now on Dr. Gierrth Ingenieurgesellschaft mbH will distribute all Priamus System Technologies products, such as cavity pressure sensors which stand out for its technical and cost advantages, or the automatic hotrunner balancing system Priamus Fill. Thus the company is using in its own systems the "eDAQ™" system, which was developed by Priamus. This device offers countless alternatives for real time control and monitoring in the injection molding process. In addition, the High Speed Ethernet data transfer ensures a fast data acquisition.

This cooperation unites and complements two innovative companies in the field of process optimizing and quality assurance in the injection molding process.

### New brochure

Priamus System Technologies did produce a new brochure where the latest product developments and applications are being presented such as the further development of the control and monitoring systems Priamus Fill and Priamus Monitor as well as technical novelties of cavity temperature and miniature cavity pressure sensors. The brochure is available in English and in German and can be obtained at any Priamus office or agent.

We wish you a Merry Christmas and a Happy and Prosperous New Year.
