New company brochure

Priamus System Technologies published a new brochure where the latest product developments and applications are being presented such as the further development of the control and monitoring systems Priamus Fill and Priamus Monitor as well as technical novelties of cavity temperature and miniature cavity pressure sensors.

PRIAMUS develops and sells control and monitoring systems for quality assurance in injection molding. PRIAMUS is worldwide the only company that offers systems which do not only monitor the injection molding process in the mold but also control it intelligently. Besides, the products stand out for innovative solutions in cavity temperature and cavity pressure measuring technology.

The brochure is available in English and in German and can be obtained at any Priamus office or by e-mail info@priamus.com.
