

## Press release

Schaffhausen, 1 Octobre 2008

### **PRIAMUS and KEBA send the same signals**

KEBA AG based in Linz/Austria and Priamus System Technologies headquartered in Schaffhausen / Switzerland break new ground with a new product line. Both companies made it their aim to provide cavity sensors in various technically and economically attractive products and applications for a wide market.

The basis is a profound integration of Priamus cavity sensors in the injection molding machine controls of KEBA. For the first time the advantages of the so far independent technologies can be used in an optimal way: For instance can the time of switchover be detected automatically. That allows an easy and fast machine setup and thus a filling study at mold setup is not needed. With the automatic detection of good / bad parts a manual inspection of the molded parts is not necessary anymore. Further functions like the monitoring of the eject temperature or the viscosity are also available.

The products are offered as PriaSmart option package of the KePlast control and will be presented for the first time at the IPF in Tokyo (booth no 60803).

Priamus System Technologies AG is an internationally operating technology company based in Schaffhausen / Switzerland with branch offices in Germany, Japan and USA. The enterprise offers innovative solutions for quality assurance in the injection molding process. The products include cavity pressure and cavity temperature sensors as well as entire control and monitoring systems which do not only monitor the injection molding process but also control it intelligently.

KEBA AG is an internationally successful electronics company headquartered in Linz / Austria. According to its guiding principle "Automation by innovation" KEBA develops and produces innovative high quality solutions for industry, bank and service automations. The business line solution KePlast is a control platform specially optimised for injection molding machines which covers all service types from standard applications to high end solutions. For more than two decades global market leaders rely on the innovative and economic KEBA solutions for injection molding machines.
